ABOUT

Full-stack developer with four years of production experience across React, PHP, and modern JavaScript. Comfortable owning a project from a blank editor to a deployed system — recently shipped a complete custom CMS, admin panel, and analytics platform for a Dublin-based consultancy. I lean toward practical engineering: clean architecture, sensible trade-offs, and software that solves the problem in front of it.

EXPERIENCE

Full-Stack Developer · GroowFuse Consult

Jan 2026 — Present · Remote · Lagos, NG

- Designed and built a complete custom site replacing the previous WordPress install: public marketing pages, blog, contact, newsletter, and 404 — built in React 19 and Vite with a custom PHP/MySQL backend.
- Shipped a full admin panel from scratch with login, role-based access (owner vs. admin), rich-text post editor with image uploads, message inbox with archive/read states, newsletter composer, and an audit log of every admin action.
- Built a self-hosted analytics page with seven Recharts visualizations (visits over time, top pages, referrers, subscriber growth, content by category, audit activity) and a privacy-first page-view tracker using HMAC-hashed visitor IDs — no cookies, no PII.
- Implemented production-grade backend: session-based auth with HttpOnly cookies, per-IP rate limiting, CORS allow-listing, file-backed audit log, IP hashing, and SMTP integration (PHPMailer) with branded HTML email templates. Deployed on shared cPanel hosting with SPF, DKIM, and DMARC configured for split-domain email delivery.

Software Engineer · The Buraq

1 year · Remote

- Built the front-line software for a real-time drowning detection system — a Progressive Web App (React) connected to an AI-powered IoT sensor array.
- Designed and implemented the API layer that brokers communication between the PWA and the IoT hardware, handling sensor events, device pairing, and connection recovery.
- Engineered the alarm pipeline: when the AI detects a drowning event, the system fires a push notification to subscribed devices that, on open, immediately triggers an on-device audio alarm — turning any phone or tablet into a lifeguard alert with sub-second event-to-alarm latency.

Full-Stack Developer · Nitastores

3 years · Remote · Lagos, NG

- Joined as feature developer on a live e-commerce platform serving 300,000+ users across a catalog of 17,000+ products. Worked across the React frontend and PHP backend.
- Implemented a smart product-suggestion engine that surfaces relevant items based on browsing behavior and cart context — a meaningful contributor to the platform's subsequent growth.
- Shipped most of the modern e-commerce features customers now expect: faceted search, wishlists, related-products carousels, cart persistence, and improved checkout flow — each measured against conversion baselines.

Web Developer · Dabyles Engineering

1 year · Remote · Lagos, NG

- Built dabyles.com.ng end-to-end — from initial design through deployment to ongoing maintenance — for an engineering services firm.
- Currently maintain the live site, handling content updates, performance work, and any feature additions the team needs. Single point of ownership for the company's entire web presence.

SKILLS & TOOLS

Languages	JavaScript, TypeScript, PHP, HTML5, CSS3, SQL
Frontend	React, Next.js, Vite, Tailwind CSS, Redux, React Router, TipTap, Recharts
Backend	PHP 8, Node.js, Express, MySQL, REST APIs, PHPMailer, session auth, rate limiting
DevOps	Git, GitHub Actions, cPanel deployment, XAMPP, npm, Composer, Apache, .htaccess
Practices	Responsive design, accessibility, SEO, performance, security hardening, SPF/DKIM/DMARC, Progressive Web Apps, IoT integration, real-time push notifications

EDUCATION

University of Lagos · Undergraduate

2023 — Present · Lagos, Nigeria
